

ABSTRACT OF THE DISCLOSURE

An Internet-based subscription service for professionals provides a convenient, reliable and efficient means of maintaining continuing professional education (CPE) information. The information may concern various types of continuing professional education, including continuing medical education, nursing education, legal education, engineering education, military education, and so forth. In the preferred embodiment, the CPE management system provides the user with a subscription service that can be obtained through various conventional channels for conducting interactive registration, depositing information, and collecting subscription service fees. Preferably, the subscription service is provided over the Internet whereby a user may access his or her CPE documentation via any conventional computer terminal connected thereto. However, in alternative embodiments, the system may also be maintained and facilitated by other methods that illustratively includes the intranet, LAN, WAN and/or via mailings.
